Malay Traditional Food Heritage System - Setup Guide

This guide provides step-by-step instructions for setting up the Malay Traditional Food Heritage System.

---

1) Clone the Project from GitHub

1. Open **Command Prompt (CMD), Git Bash, or Terminal**.

2. Navigate to the folder where to store the project:

   ```
   cd C:\xampp\htdocs
   ```

3. Clone the code:

   ```
   git clone https://github.com/SyazAwie/MalayFood.git
   ```

4. Navigate into the project folder:

   ```
   cd MalayFood
   ```

---

2) Download & Import the Database

1. **Download the Database:**

   o Open **Google Drive link**
   (https://drive.google.com/drive/folders/11ioCmTOrFbqcbv3BVqqh06-yYSETC9OA?usp=drive_link).

   o Download: **malay_traditional_food_heritage_system.sql**.

   o OR download **malay_traditional_food_heritage_system.sql file** at this Repositories.

2. **Import the Database into XAMPP:**

   o Open **XAMPP Control Panel** and **start MySQL & Apache**.

   o Open a browser and go to:

   ```
   http://localhost/phpmyadmin
   ```

   o Click **"New"**, enter the database name:

   malay_traditional_food_heritage_system

   o Click **Create**.

   o Click **Import** > **Choose File** > Select malay_traditional_food_heritage_system.sql.

   o Click **Import** to import the database.

---

3) Run the Website

1. Open **XAMPP Control Panel**, make sure **Apache & MySQL** are running.

2. Open a browser and visit:

    `http://localhost/MalayFood/home.php`

---

4) Username, password and role for users already in the database:

Username	Password	Role
Harris	harris73	User
Admin123	Admin12345	Admin
moderator	12345	Moderator
